-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2615

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 23-35 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are not capable of causing functional change in the computer. See, e.g., Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory).

It is noted that in order to cause functional change in the computer the program product must be stored in a computer medium or storage.

2. Claims 1-22 are allowed.

The prior art of record fails to suggest or disclose:

With regard to claim 1, a method for providing perspective corrected images from at least one distorted image, the method comprising steps of: receiving said distorted image; storing a portion of said distorted image, transforming a set of control vectors to a set of control points that defines an area that associates said portion of said distorted image with a

portion of a perspective corrected image, transforming said portion of said distorted image associated with said area to said portion of said perspective corrected image using a global bivariate polynomial transformation.

With regard to claim 12, an apparatus for providing perspective corrected images from at least one distorted image, the apparatus comprising: an input configured to receive said distorted image; a memory, coupled to the input, configured to store a portion of said distorted image; a processor, coupled to the memory, configured to transform a set of control vectors to a set of control points that defines an area that associates said portion of said distorted image with a portion of a perspective corrected image, the processor further configured to transform said portion of said distorted image associated with said area to said portion of said perspective corrected image using a global bivariate polynomial transformation.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zimmerman cited by Applicants (US 5,185,667) discloses a panoramic camera that uses mapping process to distorted images.
